

FEATURES

Ultra low power consumption:

0.5mA/Channel

High data rate: $\pi 110A3x$: 600Mbps

$\pi 110E3x$: 200Mbps

$\pi 110M3x$: 10Mbps

High common-mode transient immunity: 50 kV/ μ s typical

High robustness to radiated and conducted noise

Low propagation delay:

5.0 ns typical for 5 V operation

7.0 ns typical for 3.3 V operation

Isolation voltages:

$\pi 110x3x$: AC 3000Vrms

High ESD rating:

ESDA/JEDEC JS-001-2017

Human body model (HBM) ± 7 kV, all pins

Safety and regulatory approvals:

UL certificate number: E494497

3000Vrms for 1 minute per UL 1577

CSA Component Acceptance Notice 5A(Pending)

VDE certificate number: 40047929

DIN V VDE V 0884-10 (VDE V 0884-10):2006-12

$V_{IORM} = 565$ V peak

CQC certification per GB4943.1-2011(Pending)

3 V to 5.5 V level translation

AEC-Q100 qualification

Wide temperature range: -40°C to 125°C

8-lead, RoHS-compliant, SOIC package

APPLICATIONS

General-purpose multichannel isolation

Industrial field bus isolation

GENERAL DESCRIPTION

The $\pi 1xxxxx$ are 2PaiSemi digital isolators product family. By using matured standard semiconductor CMOS technology and innovative design, these isolation components provide outstanding performance characteristics superior to alternatives such as optocoupler devices and other integrated isolators. The $\pi 1xxxxx$ isolator data channels are independent and are available in a variety of configurations with a withstand voltage rating of 3.0 kV rms to 6.0 kV rms and the data rate from DC up to 600Mbps (see the Ordering Guide). The devices operate with the supply voltage on either side ranging from 3.0 V to 5.5 V, providing compatibility with lower voltage systems as well as enabling voltage translation functionality across the isolation barrier.

The fail-safe state is available in which the outputs transition to a preset state when the input power supply is not applied.

FUNCTIONAL BLOCK DIAGRAMS

PIN CONFIGURATIONS AND FUNCTIONS

π110A3x Pin Function Descriptions

Pin No.	Name	Description
1	V _{DD1}	Supply Voltage for Isolator Side 1.
2	V _{IN}	Logic Input.
3	V _{DD1}	Supply Voltage for Isolator Side 1.
4	GND ₁	Ground 1. This pin is the ground reference for Isolator Side 1.
5	GND ₂	Ground 2. This pin is the ground reference for Isolator Side 2.
6	V _{OUT}	Logic Output.
7	GND ₂	Ground 2. This pin is the ground reference for Isolator Side 2.
8	V _{DD2}	Supply Voltage for Isolator Side 2.

Figure3. π110A3x Pin Configuration

ABSOLUTE MAXIMUM RATINGS

T_A = 25°C, unless otherwise noted.

Table 1. Absolute Maximum Ratings⁴

Parameter	Rating
Supply Voltages (V _{DD1} -GND ₁ , V _{DD2} -GND ₂)	-0.5 V to +7.0 V
Input Voltages (V _{IA} , V _{IB}) ¹	-0.5 V to V _{DDx} + 0.5 V
Output Voltages (V _{OA} , V _{OB}) ¹	-0.5 V to V _{DDx} + 0.5 V
Average Output Current per Pin ² Side 1 Output Current (I _{O1})	-10 mA to +10 mA
Average Output Current per Pin ² Side 2 Output Current (I _{O2})	-10 mA to +10 mA
Common-Mode Transients Immunity ³	-150 kV/μs to +150 kV/μs
Storage Temperature (T _{ST}) Range	-65°C to +150°C
Ambient Operating Temperature (T _A) Range	-40°C to +125°C

Notes:

¹ V_{DDx} is the side voltage power supply V_{DD}, where x = 1 or 2.

² See Figure4 for the maximum rated current values for various temperatures.

³ See Figure13 for Common-mode transient immunity (CMTI) measurement.

⁴ Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

RECOMMENDED OPERATING CONDITIONS

Table 2. Recommended Operating Conditions

Parameter	Symbol	Min	Typ	Max	Unit
Supply Voltage	V _{DDx} ¹	3		5.5	V
High Level Input Signal Voltage	V _{IH}	0.7*V _{DDx} ¹		V _{DDx} ¹	V
Low Level Input Signal Voltage	V _{IL}	0		0.3*V _{DDx} ¹	V
High Level Output Current	I _{OH}	-6			mA
Low Level Output Current	I _{OL}			6	mA
Maximum Data Rate		0		600	Mbps
Junction Temperature	T _J	-40		150	°C
Ambient Operating Temperature	T _A	-40		125	°C

Notes:

¹ V_{DDx} is the side voltage power supply V_{DD}, where x = 1 or 2.

Truth Tables

Table 3. π110xxx Truth Table

V _{ix} Input ¹	V _{DDI} State ¹	V _{DDO} State ¹	Default Low V _{Ox} Output ¹	Default High V _{Ox} Output ¹	Test Conditions /Comments
Low	Powered ²	Powered ²	Low	Low	Normal operation
High	Powered ²	Powered ²	High	High	Normal operation
Open	Powered ²	Powered ²	Low	High	Default output
Don't Care ⁴	Unpowered ³	Powered ²	Low	High	Default output ⁵
Don't Care ⁴	Powered ²	Unpowered ³	High Impedance	High Impedance	

Notes:

¹ V_{ix}/V_{Ox} are the input/output signals of a given channel (A or B). V_{DDI}/V_{DDO} are the supply voltages on the input/output signal sides of this given channel.

² Powered means V_{DDx} ≥ 2.9 V

³ Unpowered means V_{DDx} < 2.3V

⁴ Input signal (V_{ix}) must be in a low state to avoid powering the given V_{DDI}¹ through its ESD protection circuitry.

⁵ If the V_{DDI} goes into unpowered status, the channel outputs the default logic signal after around 1us. If the V_{DDI} goes into powered status, the channel outputs the input status logic signal after around 1us.

APPLICATIONS INFORMATION

OVERVIEW

The π 1xxxxx are 2PaiSemi digital isolators product family. By using matured standard semiconductor CMOS technology and innovative design, these isolation components provide outstanding performance characteristics superior to alternatives such as optocoupler devices and other integrated isolators. The π 1xxxxx isolator data channels are independent and are available in a variety of configurations with a withstand voltage rating of 3.0 kV rms to 6.0 kV rms and the data rate from DC up to 600Mbps (see the Ordering Guide).

The π 110A3x are the outstanding 600 Mbps single -channel digital isolators with the enhanced ESD capability. the devices transmit data across an isolation barrier by layers of silicon dioxide isolation.

The devices operate with the supply voltage on either side ranging from 3.0 V to 5.5 V, offering voltage translation of 3.3 V and 5 V logic.

The π 110A3x have very low propagation delay and high speed. The input/output design techniques allow logic and supply voltages over a wide range from 3.0 V to 5.5 V, offering voltage translation of 3.3 V and 5 V logic. The architecture is designed for high common-mode transient immunity and high immunity to electrical noise and magnetic interference.

See the Ordering Guide for the model numbers that have the fail-safe output state of low or high.

PCB LAYOUT

The low-ESR ceramic bypass capacitors must be connected between V_{DD1} and GND_1 and between V_{DD2} and GND_2 . The bypass capacitors are placed on the PCB as close to the isolator device as possible. The recommended bypass capacitor value is between 0.1 μ F and 10 μ F.

Figure11. Recommended Printed Circuit Board Layout

Avoid reducing the isolation capability, Keep the space underneath the isolator device free from metal such as planes, pads, traces and vias.

To minimize the impedance of the signal return loop, keep the solid ground plane directly underneath the high-speed signal path, the closer the better. The return path will couple between the nearest ground plane to the signal path. Keep suitable trace width for controlled impedance transmission lines interconnect.

To reduce the rise time degradation, keep the length of input/output signal traces as short as possible, and route low inductance loop for the signal path and It's return path.

JITTER MEASUREMENT

The eye diagram shown in the figure18 provides the jitter measurement result for the π 110A3x. The Keysight 81160A pulse function arbitrary generator works as the data source for the π 110A3x, which generates 100Mbps pseudo random bit sequence (PRBS). The Keysight DSOS104A digital storage oscilloscope captures the π 110A3x output waveform and recovers the eye diagram with the SDA tools and eye diagram analysis tools. The result shows a typical measurement 90ps p-p jitter.

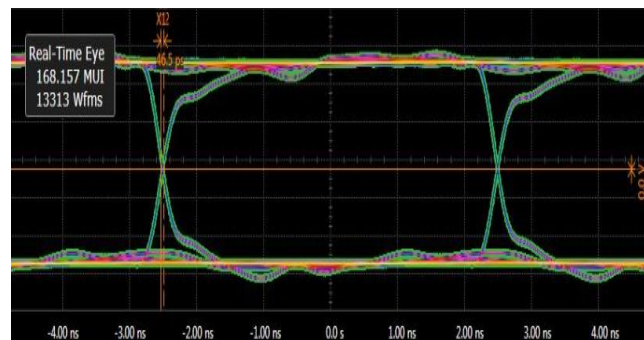

Figure12. π 110A3x Eye Diagram

CMTI MEASUREMENT

To measure the Common-Mode Transient Immunity (CMTI) of π 1xxxxx isolator under specified common-mode pulse magnitude (V_{CM}) and specified slew rate of the common-mode pulse (dV_{CM}/dt) and other specified test or ambient conditions, The common-mode pulse generator (G_1) will be capable of providing fast rising and falling pulses of specified magnitude and duration

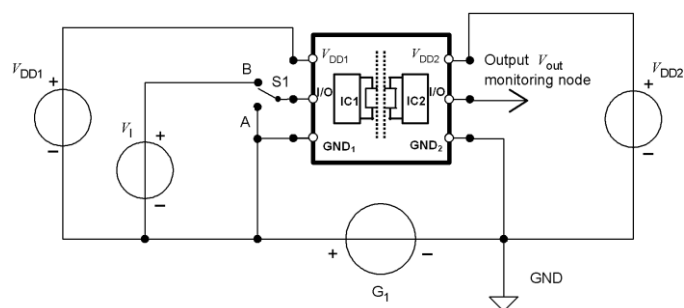

Figure13. Common-mode transient immunity (CMTI) measurement

of the common-mode pulse (V_{CM}) and the maximum common-mode slew rates (dV_{CM}/dt) can be applied to π 1xxxxx isolator coupler under measurement. The common-mode pulse is applied between one side ground GND_1 and the other side ground GND_2 of π 1xxxxx isolator and shall be capable of providing positive transients as well as negative transients.
